

Project Initialization and Planning Phase

Date	8 JULY 2026
Team ID	-
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed system uses Artificial Intelligence to help users manage multiple loans, reduce financial stress, and plan repayments efficiently. It analyzes income, expenses, and loan details to recommend the best repayment strategy, send EMI reminders, and improve financial decision-making.

Project Overview	
Objective	Develop an AI-powered system that helps users manage debts, prioritize loan repayments, and improve financial stability.
Scope	The system provides personalized repayment plans, EMI reminders, expense tracking, debt analysis, and financial insights for users with multiple loans.
Problem Statement	
Description	Many people struggle to manage multiple loans, miss EMI payments, and lack proper financial guidance, leading to increased debt and penalties.
Impact	The solution reduces financial stress, avoids missed EMIs, improves repayment planning, and helps users become debt-free faster.
Proposed Solution	

Approach	Use AI and machine learning to analyze user income, expenses, and loan details to generate personalized repayment strategies and financial recommendations.
Key Features	- AI-based debt analysis - Personalized repayment plan - EMI reminders and alerts - Expense and income tracking - Financial health dashboard - Loan priority recommendations

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel i5/Ryzen 5 Processor
Memory	RAM specifications	8 GB RAM
Storage	Disk space for data, models, and logs	256 GB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	Scikit-learn, Pandas, NumPy, Matplotlib
Development Environment	IDE	VS Code, Jupyter Notebook
Data		

Data	Source, size, format	Loan repayment dataset, user financial data (CSV format), Kaggle financial datasets.
